(a) Avalanche Effect Distribution
Codeword ($\mu = 50.07\%$)
Decoded ($\mu = 50.10\%$)
Ideal SAC (50.0%)
Probability Density
Bit Flip Percentage (%)
(b) Strict Avalanche Criterion (SAC)
Codeword Bit Flip Prob. $P(\Delta x_j = 1)$
Ideal SAC Target = 0.50
Flip Probability
Codeword Bit Index $j \in [0, N-1]$
(c) Inter-Codeword Cross-Correlation
$\mu = -0.0014, \sigma = 0.0603$
Uncorrelated ($\rho = 0$)
Probability Density
Normalized Cross-Correlation $\rho(\mathbf{x}, \mathbf{x}')$
